## The all-rounders

### FILTER SYSTEM FOR WATER OPTIMISATION

Raw water needs to be optimised for the specific requirements of the catering industry (HORECA). BWT bestmax provides you with a universal filter system that fulfils this task simply and efficiently.

The filter system consists of a filter cartridge with five filter levels and a BWT besthead filter head (see graphic) that is screwed on. The blend partial flow (0-3) is set on the filter head depending on the water hardness and requirement. Check valves in the filter head prevent the water from flowing back into the drinking water mains or filter cartridge and protect against uncontrolled water discharge.

BWT bestmax food-safe filter systems are pressure-resistant and safe. They can be used worldwide in any drinking water system.

<sup>(1)</sup> Capacities may deviate by up to ±5 % depending on the local water quality and volume flow. <sup>(2)</sup> °dKH = German temporary hardness.

<sup>(3)</sup> Default blend setting = 1. For devices sensitive to limescale, blend setting = 0. This reduces the capacities stated by approx. 10%. Subject to change.
